

WRU90001 / WRU01001 – WIRELESS ROOM UNIT WITH TEMPERATURE, RELATIVE HUMIDITY AND CO₂ SENSOR

Wireless, battery powered HMI unit. The device features temperature, humidity and CO₂ sensors as an option. The measured values can be displayed to user on a large LCD display or multicolour LEDs. It features a native modbus map that grants seamless integration into the DDC/SCADA system. The communication is based on the AES128 encrypted Midam KFP protocol, which allows to update the device firmware on a wireless basis.

GENERAL INFORMATION

This document explains the Modbus protocol for WRU90001/ WRU01001 room/sensor units family. Modbus is a communication protocol open to all users and supported in common by many manufacturers. The Modbus protocol allows data and setup information to be transferred between a Modbus Master and a Modbus Slave.

250 words can be read at the same time (i.e. 500 bytes).

Type:

R – register is read only

W – register is write only

RW – register is read/write,

RWE – register is read from EEPROM, write to EEPROM

The supported Modbus functions are:

03 Read Holding Registers – read words

16 Force Multiple Registers – write words
